

The 7D-CA display card is designed to simplify connecting 7-segment displays to ElectronFlux ports.

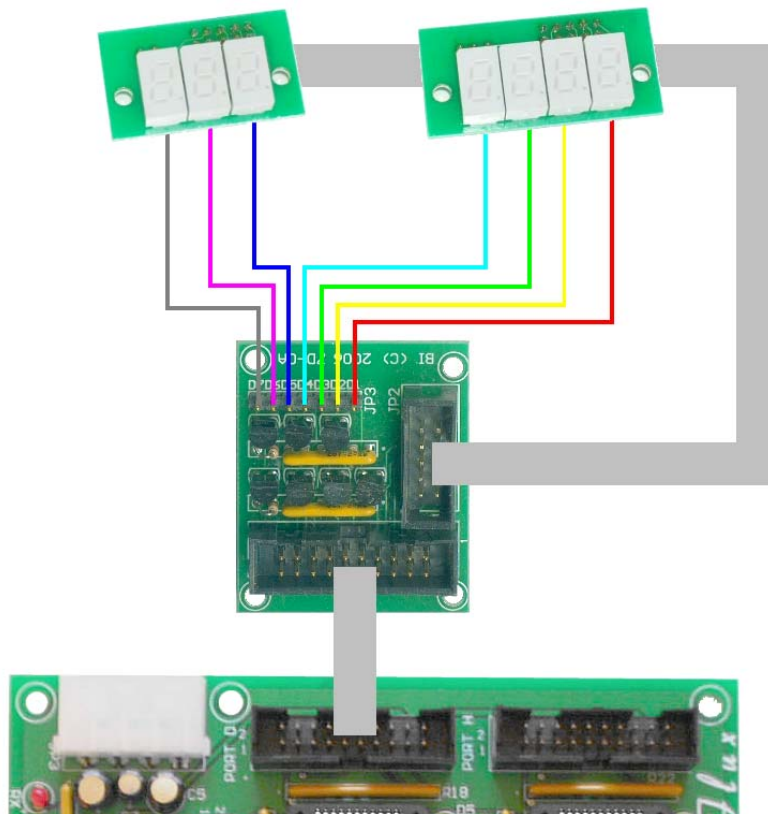

Features:

- Supports up to 7 digits per port.
- Daisy chain multiple displays on a single ribbon cable.

Application:

The 7D-CA adapter card eliminates the need to create a custom wiring harness. Includes the switching transistors required for ElectronFlux ports configured for multiplexed mode. Each adapter card supports up to 7, 7-segment displays and can be grouped as needed.
